Transforming Research Into Knowledge

Cartagio

Cartagio™, Missiontrek's next generation Internet teamware, provides the framework for knowledge professionals to collaborate virtually, effectively, globally. With Cartagio, the modern journalist or web researcher effortlessly captures, summarizes and allocates research done anywhere on the Web.

Cartagio users can work individually or, with Cartagio Enterprise™, collaboratively together toward one common objective: providing clients with the highest level of service, in the most efficient manner possible.

RESEARCH + CARTAGIO = STORED EXPERTISE

Knowledge workers, executives and IT professionals appreciate Cartagio's intuitive design, productivity and administrative features: Cartagio leverages and integrates the best aspects of the Microsoft suite while providing an extended feature set designed to empower today's journalist or research professional. Cartagio silently captures and converts your research into expertise or shareable knowledge, stored in a Project-Based Browsing (PBB) file.

WANTED: A COMPLETE RESEARCH SOLUTION

Research professionals know that there are numerous "plug ins" on the market that can address some particular aspect of the research experience. Some may willingly expend the time and effort needed to assemble an entire suite of such products, and might not mind the potential bugs associated with such an amalgamation of code. Cartagio is not for them. For the rest of us, time is just too precious. For us, there is the Cartagio browser: optimized for research, uncluttered by shareware, "plug-ins" and 3rd party extensions.
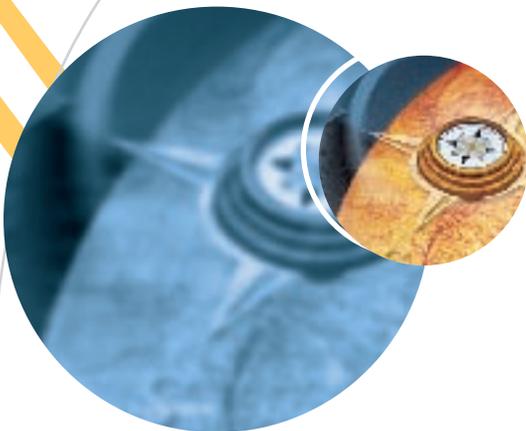

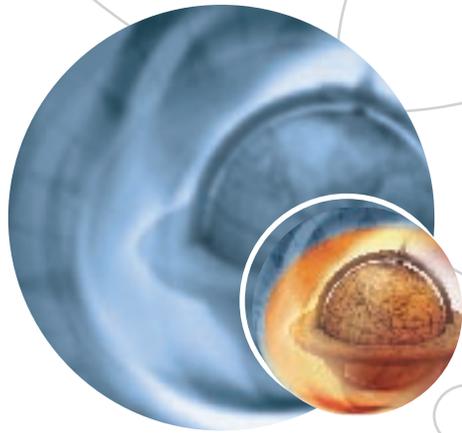

REAL-TIME DOCUMENT COLLABORATION

Many applications provide simple briefcase functionality. Cartagio takes this to a new level by enabling you to selectively and securely share your documents over the Web. And of course, your documents are always associated with the appropriate project, where you, your colleagues and authorized business partners may access them from anywhere, at any time.

POWERING YOUR VIRTUAL WORKGROUP

Cartagio's collaborative elements extend beyond documents and beyond browsing. Server-side chat rooms let you communicate privately in real time with clients and partners alike. Project Centrale organizes your collective research into summary and statistical information. TrailTracker provides a means for others to follow your research, through a personalized tour, navigational history, or bookmarks, arranged in the order you deem most efficient.

SECURE TEAMWARE

Peer-to-Peer solutions can be great for end-users, but are a nightmare to administer. Server-side applications are easy to maintain but are often inflexible from the users' perspective. Cartagio leverages the best of Peer-to-Peer and client/server architecture by giving users the collaborative tools they need while providing centralized administration, control and reporting. Missiontrek's pioneering technology lets users work together on both sides of the firewall while leveraging your secure pipeline to transmit sensitive information in an encrypted format, extending a virtual shield over their data as they blaze trails through the net.

ADMINISTRATION

Cartagio's back office functionality provides administrators and IT professionals the tools they need to run a tight ship. Administrative functions provide user- and group-level control of surfing habits (site filtering, access times, nonbillable usage) and project-specific activities (project access, resource allocation, file sharing). Statistical and management reports compare total browsing time to billable productivity and even browsing efficiency. Corporate firewalls tell IT people who went where and when. Cartagio tells a savvy business executive what they did there, who they did it for, why they did it, how long it took them, what is left to do.

Deployed in minutes not months, Cartagio is an enterprise knowledge solution that is affordable, intuitive, simple to install and easy to maintain.

HARDWARE REQUIREMENTS

233 Mhz Pentium (or higher) is recommended with at least 32MB RAM
800*600 Pixel 256+ Color Monitor
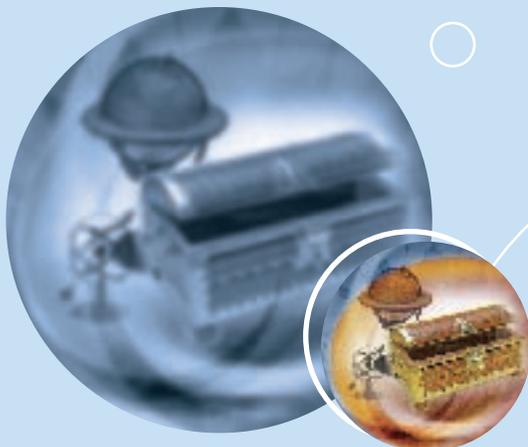

SOFTWARE REQUIREMENTS

Microsoft Windows 98, 95, 2000, Me or NT4
IE 4.01 or Higher Installed
